

# User-Info Project

## Over View:

User-Info project is build in React. The main objective of the project is to implement the CRUD(create update read delete) operation. User can interact with the system and can create new user information. They can update the existing user information and can also delete. For dummy data we have use JsonPlaceholder API. We have use fetch() request in order make API call.

## Objective:

- Use of fetch() for fetching resources across the network.
- Learning useState Hook to track state in a component.
- Learning useEffect Hook to perform side effect in component.
- Learning component.
- Learning to use props to pass data.

## Conclusion:

The main objective of the project is to implement CRUD operation.
